Introduction

1.1 Purpose

The purpose of this document is to define and provide details for accessing API for transaction details from MCA (**Ministry of Corporate Affairs**) system from ULIP system. This document details the following points:

1. **Data Integration between MCA and ULIP web service:** Identification of operational points where data integration between MCA and ULIP web service will be needed.
2. **Technical Approach** for performing Data Integration

The Overall Description

Users will share information such as Corporate Identification Number (**CIN**) based on data sent by user ULIP system will call **MCA** API for accessing information.

Following is the point for accessing cargo information: -

1. This API will share data based on information provided by users.
2. ULIP will expose API for getting data from IWA API.
3. **MCA/01** API will take Corporate Identification Number (**CIN**) from user and get data from MCA API.

1.2 Data Integration between MCA System and ULIP application

Users will share information with the ULIP system based on data shared ULIP will provide data to user.

1.3 MCA/03

This API will take **Corporate Identification Number** and connect with MCA API to get data.

S. No.	Field Name	Field Description	Format	Required/Not – Required	Length
1	CIN	Corporate Identity Number (CIN) as available in MCA system.	^[L U]{1})([0-9]{5})([A-Za-z]{2})([0-9]{4})([A-Za-z]{3})([0-9]{6})\$	Required	21

1.5.1 Technical Approach

1. All the data will be shared through rest web services.
2. ULIP system will provide **Corporate Identification Number** for which detail is required.
3. MCA API will share details of company transaction information which exist in MCA system in JSON format.
4. ULIP system will provide the data in JSON Object format in response body.

Example: Corporate Identification Number **U01100AP2018PTC107442** is shared by ULIP system, then MCA-integration will make a request to MCA API.

Request: The request must be of the following format, where **corporate identification number** is passed within the URL body in JSON format.

For Production: <https://www.ulip.dpiit.gov.in/ulip/v1.0.0/MCA/03>

```
{ "cin": "U01100AP2018PTC107442" }
```

Curl URL

```
curl --location --request POST 'https://www.ulip.dpiit.gov.in/ulip/v1.0.0/MCA/03' \
--
header 'Authorization: Bearer eyJhbGciOiJIUzUxMiJ9.eyJzdWIiOiJ1bGlwliwiaWF0IjoxNzEwODIwNDI1LCJhcHBzljoiZGF0YXB1c2gifQ.6iUIRYRQRtU7YAI6u_kquNeLGH3BEWI95PGGJ4RMDdCJAbO4SDOsV2DNSV4_iGxo7b6dZj6y277HXPi6sEqGyA' \
--header 'Content-Type: application/json' \
--header 'Accept: application/json' \
--data-raw '{ "CIN": "U01100AP2018PTC107442" }'
```

For Staging: <https://www.ulipstaging.dpiit.gov.in/ulip/v1.0.0/MCA/03>

```
{ "cin": "U01100AP2018PTC107442" }
```

Curl URL

```
curl --location --request POST 'https://www.ulipstaging.dpiit.gov.in/ulip/v1.0.0/MCA/03' \
--

--header 'Content-Type: application/json' \
--header 'Accept: application/json' \
--data-raw '{ "CIN": "U01100AP2018PTC107442" }'
```

For obtaining authentication token, refer Section [1.8](#)

Response

To acknowledge the above request, ULIP will send the below response -

a) In case of invalid format

1. Invalid corporate identification number

```
{  "response": null,
  "error": "true",
  "code": "400",

1.6 MCA/04

This API will take **Corporate Identification Number** and connect with MCA API to get data.

S. No.	Field Name	Field Description	Format	Required/Not – Required	Length
1	CIN	Corporate Identity Number (CIN) as available in MCA system.	^([L U]{1})([0-9]{5})([A-Za-z]{2})([0-9]{4})([A-Za-z]{3})([0-9]{6})\$	Required	21

1.6.1 Technical Approach

1. All the data will be shared through rest web services.
2. ULIP system will provide **Corporate Identification Number** for which detail is required.
3. MCA API will share details of directors' details of the company which exist in MCA system in JSON format.
4. ULIP system will provide the data in JSON Object format in response body.

Example: Corporate Identification Number **U01100AP2018PTC107442** is shared by ULIP system, then MCA-integration will make a request to MCA API.

Request: The request must be of the following format, where **corporate identification number** is passed within the URL body in JSON format.

For Production: <https://www.ulip.dpiit.gov.in/ulip/v1.0.0/MCA/04>

1.7 MCA/05

This API will take **Director Identification Number** and connect with MCA API to get data.

S. No.	Field Name	Field Description	Format	Required/Not – Required	Length
1	DIN	Director Identification Number (DIN) as available in MCA system.	0-9]{8}	Required	8

1.7.1 Technical Approach

1. All the data will be shared through rest web services.
2. ULIP system will provide **Director Identification Number** for which detail is required.
3. MCA API will share details of directors' details of the company which exist in MCA system in JSON format.
4. ULIP system will provide the data in JSON Object format in response body.

Example: Director Identification Number **09597232** is shared by ULIP system, then MCA-integration will make a request to MCA API.

Request: The request must be of the following format, where **Director identification number** is passed within the URL body in JSON format.

For Production: <https://www.ulip.dpiit.gov.in/ulip/v1.0.0/MCA/05>

```
{"DIN": "09597232"}

1.8 Data Transmission & Authentication Mechanism

All data exchange would be done over secure HTTP (HTTPS). Request from ULIP's system would be made in IWAI system through a data exchange URL that has following form:

For Production: <https://www.ulip.dpiit.gov.in/ulip/v1.0.0/MCA/01>

Body:

```
{"cin":"L17110MH1973PLC019786"}
```

Access to above data exchange URL would be authorized by use of a security mechanism implemented by the ULIP system. It is as follows:

- First time access: It would require a username and password [which would be shared with user beforehand]. Once user hit with valid user id and password, ULIP system will return a basic authorization token to user, using that token user will communicate with ULIP system until tokens will not get expired.

Summary of HTTP Basic Authentication is as follows:

First time when User hits ULIP secured API through username and password for access token as follow-

```
curl --location --request POST 'https://www.ulip.dpiit.gov.in/ulip/v1.0.0/user/login' \
  --header 'Accept: application/json' \
  --header 'Content-Type: application/json' \
  --data-raw '{
    "username": "xxxx",
    "password": "xxxx@123"}'
```

Authorization:

Bearer

```

Upon successful authentication, the user would be logged into the ULIP system and get an access token. Though this token user can communicate with ULIP. This token has expiry time which represents user session. The session time out for the same to be fixed hour, generally it is for 30 minutes. If there is no request coming from user for 30 minutes, then session (token) will be expired, and user need to re authenticate.

Using The above token, user can request ULIP system for CIN details as follow -

```
curl -X POST \
  https://www.ulip.dpiit.gov.in/ulip/v1.0.0/MCA/01 \
  -H 'accept: application/json' \
